

TISSUE FORMS

Abstract

5 The present invention relates to an implant comprising two or more bone
fragments that are combined to form a single unit. Cancellous bone or cortical bone is
removed from a source and fashioned into bone components with desirable shapes and sizes.
The bone components may be integrated to form implants for implantation in the body.
Bone stock may be formed by combining sections of various bones of the body, and the
10 bone stock may be further fashioned for use as implants with particular geometries.
